Youn, Chirl-Ho

The target levels for safety management of the country expend from on a large scale disaster such as flood, earthquake, building collapse, fire, etc, to on a small scale safety accident like a car accident, crime, hygiene, etc.

The Reliable Village demonstration project began to establish a safe living environment by the inhabitants in some area, and to find a solution for their own safety. The Ministry of Security and Public Administration had invited public participations for the demonstration project targeting 31 municipal government resident's associations, and selected 10.

The purpose of this study is to improve the effectiveness of the project and to make a more well-organized guideline which is meant to expand inhabitants initiative Reliable Village project by the monitoring all the processes of the 10 projects.

The 10 targeting areas of this study are located at Yeokchon-dong in Seoul, Songjuk-dong in Suwon, Wonseong-dong In Cheonan, Yangchon-eup in Kimpo, Jincheon-eup in Jincheon, Bongsun 1-dong in

Gwangju, Jungang-dong in Suncheon, Yeonsan 1-dong in Busan, Ganseong-eup in Goseong, Buksang-myeon in Geochang. Those areas are located evenly all over the country. The study range is limited to spacial safety infrastructure in the projects such as a street, unstable public facility, security light, etc.

In this study, searching the existing legal system and referring to similar cases such as ‘Safe City project’, ‘Emergency Management town project’, which was to find the problems of our institutional environment and to deduct the implications of others were implemented. And then the ideal direction and the guideline supporting the projects were proposed through analyzing the monitoring results.

In the projects monitoring process, we provided the consultation to resident’s associations by participating an advisory panel consisted of several professional organizations, and evaluated the results by visiting the sites and interviewing local residents when the projects were accomplished.
